Testing lab facilities contrary to popular belief, are extremely most useful for common people. Nowadays, markets are flooded with cheap imported, substandard & inefficient products and necessary to find out whether they confirm the quality & safety standards as required.

Household items like pressure cookers, LPG stoves, washing machines, Geysers/water heaters, electrical cables and other consumer durables add convenience to our life but the substandard products are dangerous and imply direct compromise with minimum safety requirements. The tested household items and consumer durables ensure safety and prevent accidents in our day to day life.
